

## TK-TEAM TOUCH SCREEN

## Interactive lessons and joy of learning

The touch screen interactive features bring life and joy to teaching. Touch screen connection can be created from a tablet or mobile phone. Students can participate during the lessons with their own mobile devices or with the devices provided by the school.

### Added value to exercises

In addition to versatile presentation possibilities the touch screen features mean added value to your learning. For example, students can practise letters and numbers by drawing them directly on the screen. A certain pattern can be brought to the screen and the students can use it as a platform of a drawing exercise. Practising is more interesting on a big screen than on a traditional chalkboard.

### Brings life to teaching materials

Teaching can be constructed in many different ways since the choice and versatility of the teaching material is practically endless. With the help of the software that comes with the touch screen you can combine picture, sound and video. Materials can also be stored for use in many different formats.

Teachers can take advantage of e-learning materials provided by external service providers, such as e-books or software. For example, there are programs for teaching mathematics or music that allow students to create their own compositions and more easily understand and perceive mathematical charts. In language teaching, combining image and sound enhances learning.

## Versatile communication for companies

### Interactive meetings

In negotiations interactivity of the touch screen connects the attendees of the meeting. From the big touch screen each attendant can easily see the material being processed. Feedback can be given directly on the screen and shared easily to all concerned. Using touch screen in video conferencing inside the company or with the customers is easy and cost effective.

### Smoothness for design work

The touch screen can be used for example for assessment of the drawings, for presentations and for brainstorming. It is easy to make changes and save materials for further use. With pictures and videos, things can be clearly illustrated, and the necessary amendments can be easily done based on visual instructions.

### Up-to-date information

In exhibition or lobby areas the display can be used as an information divider. The touch screen allows you to rotate videos and other presentation material.

### Visuality for sales

Producing versatile sales materials is easy using the various features of the touch screen programs. Products can be presented to the customer using videos, pictures and websites. Customer can for example build a product of his wishes with colour and accessories by using touch screen.

### Production efficiency

Touch screens make it easy to track the operation of the production line. A problem on the production line or a fault in a product can be studied on the screen by magnifying a picture of the respective issue. Notes and change proposals can be made directly on the screen and saved for easy retrieval.

### Conference rooms for efficient use

In the lounges of the hotels and conference facilities guests can get access to the versatile tools of the touch screen and its wide variety of programs.

## Lift your presentation to a new level with the interactive LED multi-touch screen

The use of the touch screen in presentations allows the audience to be observed and involved in the presentations in a new way. All the activities of the performer can take place without breaking the connection to the audience.

Ease of use, 4K image quality and the capabilities of the built-in Android operating system and wireless control are standard features of a modern meeting or training room.

The LED multi-touch screen registers up to 20 simultaneous touch points, so multiple users can use the touch screen simultaneously. You can write or draw on the screen with your finger or a soft-pointed pen. All notes on the screen can be saved and shared.

Users can handle eg. pictures and videos with the rich Note and Capture software's included with in the touch screen. We also supply with touch screen Connect software that lets you wirelessly connect your Android or IOS device to the touch screen. Our range includes touch screens and a wide range of accessories.

## Stylish and safe design

Stylish and safe design and non-reflective 4 mm safety glass makes TK-Team Touch screen your reliable and impressive interior design element. TK-Team Touch screens are designed for elegance and safety: the edges of the displays are rounded, allowing for safe use of displays, for example class areas. The depth of the touch screens is only 42 mm, so they fit perfectly into different spaces. The screens are supplied with a sturdy and secure wall mount.

## Precise technical quality

Touch screen accuracy and sensitivity of TK-Team touch screens are the best in their field. Touch response time is only 4 ms so there is practically no delay in contact. The quality of the touch screens is always 4K / UHD. LED panels are energy-efficient and durable 24/7 panels.

### Android operating system as standard

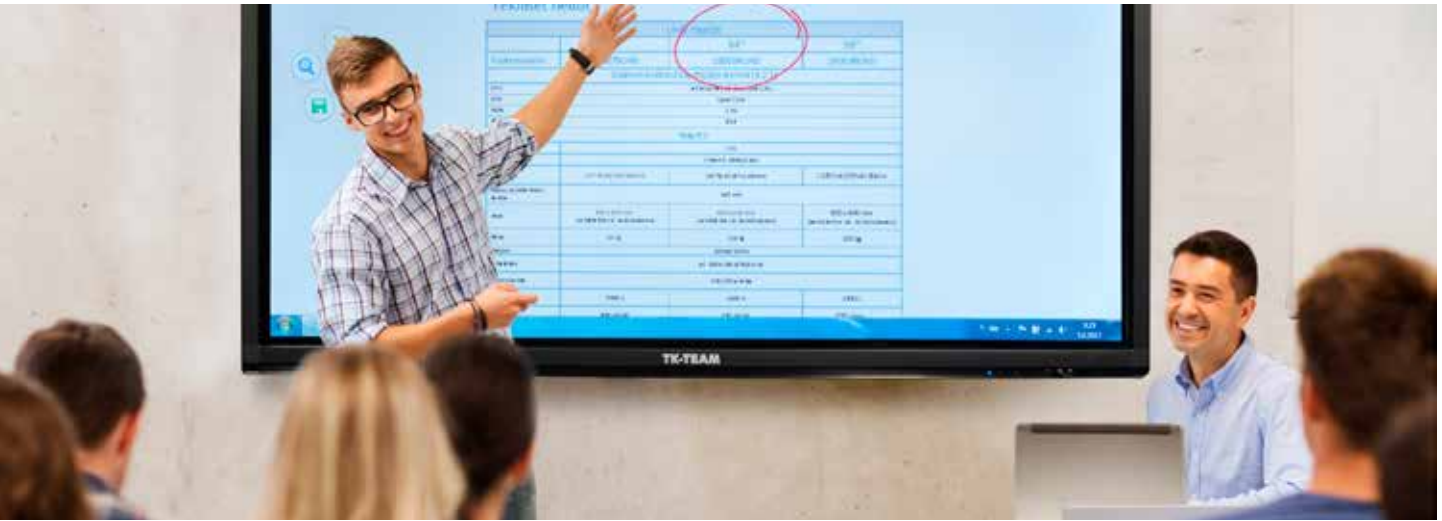

The Android operating system is standard, so you can use the touch screen without an external computer. With the included Note software, you can make and save your notes to the on-screen memory or transfer your notes directly to a USB stick. In addition, the display comes with, among others. WPS Office appli-

cation that lets you handle familiar Windows Office programs. You can also install your own applications.

### Versatile connections

TK-Team touch screens are equipped with versatile connections, eg. with several HDMI, VGA and USB ports. You can easily connect your computer to the touch screen with two cables: for transferring an image via HDMI or VGA cable and for transferring a USB cable. The required drivers will be installed automatically during the first installation. Versatile connections allow you to take advantage of multiple devices in your presentation.

# SOFTWARE

**Software is included in the delivery of touch screens.  
See our website for minimum software requirements.**

## Note

A versatile Note software that allows you to write and take notes. The program supports multi-touch, making it easy and effortless to resize images and video.

## Capture

With Capture software, you can save on-screen operations conveniently for further use, such as educational or training material. You can also take advantage of an external camera and record video. Also included is the ability to edit videos.

## Connect

Connect software allows you to easily mirror your Android and IOS devices over the wireless network to the TK-Team touch screen. Share pictures, videos or PowerPoint material for everyone to see. Connect easily and quickly via the QR code on the screen.

# ACCESSORIES AND STANDS

## Computer module

TK-Team a computer module with versatile connections is available for the touch screen. The module is also easy to install on the touch screen afterwards. See our website for minimum software requirements.
