

Cleaning instructions

Mobile Protection Barrier

Cleaning instructions:

1. Clean the panel of the Protection Barrier with a soft, lint-free cloth (e.g. microfiber cloth), using a neutral or weak alkaline detergent. Dissolve the dirt and avoid unnecessary rubbing.
2. Do not use sharp materials, solvents, or a rough brush for cleaning.
3. Detergent residue, clean with clean water, and dry the panel with a soft cloth.

Other considerations:

- Abrasive, strongly acidic and strongly alkaline detergents should not be used.
- Aromatic and halogenated solvents such as Toluene, Benzene, Asentone and MEK will damage the panel.
- The use of incorrect detergents will cause the guards to crack, become cloudy and swell.
- Do not use sharp tools to remove dirt.

Suitable chemicals:

- Ethanol <96%
- Isopropanol <100%
- Methanol <100%
- Hydrogen peroxide solution <30%
